The present sequence is novel human protein (NHP) known as human kinase.

The human kinases share structural similarity with animal kinases, more particularly serine or threonine protein kinases. Human kinase cDNA is useful for the detection of muttan human kinase cDNA is useful for the detection of muttan human kinase cDNA is useful for the detection of muttan human kinase for the diagnosis of disease, and also as a therapeutic. It is useful for screening drugs effective in the treatment of symptomatic or phenotypic manifestations perturbing the normal function of NHP in the body. The NHP nucleotide sequences are useful for generation of other cellular gene products related to human kinases, and as reagents in assays for screening compounds that are useful for treating mental, biological or medical disorders. NHP oligonucleotides are used as probes. The labelled NHP probes are useful for screening numan genomic library for identifying polymorphisms and as primers in amplification assays to detect mutations within the exons, introns and splice sites that can be used in disposites and pharmacogenomics. Nucleotide construct encoding NHP products are used to genetically engineer cells in vivo that functions as bioreactors in the body delivering a continuous supply of NHP to the horaw. For the medical of nucreound supply of NHP to the horaw. For the medical in gene the supplement of the products are used in gene that the medical supplement in gene the supplement of the products are used in gene that the medical supplement in gene that the medical supplement in gene that the medical supplement in gene that the medical supplement in gene that the medical supplement in gene that the medical supplement in gene that the medical supplement in gene that the medical supplement in gene that the medical supplement in gene that the medical supplement in gene that the medical supplement in gene that the medical supplement in gene that the medical supplement in the medical supplement in the medical supplement in the medical sup

Ş

AAE00495 RESULT

Human, kinase, gene therapy, bioreactor, mental disorder, biological disorder.

WO200123579-A1. Homo sapiens.

```
The present sequence is novel human protein (NHP) known as human kinase. The human kinases share structural similarity with animal kinases, more particularly serine or threonine protein kinases. Human kinase cDNA is useful for the detection of mutant human kinase for the diagnosis of disease, and also as a therapeutic. It is useful for screening drugs effective in the treatment of symptomatic or phenotypic manifestations perturbing the normal function of NHP in the body. The NHP nucleotide sequences are useful for generation of antibodies, as reagents in diagnostic assays, for the identification of other cellular gene products remained to human kinases, and as reagents in assays for screening compounds that are useful for treating mental, biological or medical disorders. NHP oligonucleotides are useful for screening human genomic library for identifying polymorphisms and as primers in amplification assays to detect mutations
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          within the exons, introns and splice sites that can be used in diagnostics and pharmacogenomics. Nucleotide construct encoding NHP products are used to genetically engineer cells in vivo that functions as bioreactors in the body delivering a continuous supply of NHP to the body. Nucleotide constructs encoding functional NHPs are used in gene
                                                                                                                                                                                                                                                                                                                                   New isolated human kinase polynucleotide useful for generating antibodies, as reagents in diagnostic assays and for screening for compounds useful for treating mental, biological or medical diseases.

```

The present invention relates to an isolated human kinase polypeptide (PKIN) or a biologically active/immunogenic fragment of PKIN is useful for diagnosing, treating and preventing cancer (e.g., leukaemia, lymphoma, melanoma), an immune disorder (e.g., acquired immunodeficiency syndrome (AIDS), Addison's disease, allergy, anaemia, asthma, Crohn's cardisease, rheumatorid arthritis), a growth and developmental disorder (e.g., atherosclerosis, hypertension, myocardial infarction), and a lipid disorder (e.g., fatty liver, cholesteasis, caucher's disease, Niemann-Pick's disease). PKIN is useful in a number of drug screening techniques and to analyse the proteome of a tissue or cell type. PKIN is useful for creating Knockin humanised animals or transgenic animals to model human diseases, in somatic or germline gene therapy, to generate a transcript image of a tissue or cell type, for detecting canimals to model human diseases, in somatic or germline gene therapy, center, among normal, carrier or affected individuals, and as hybridisation, ctc., among normal, carrier or affected individuals, and as hybridisation in southern or northern analysis, dot blot or other membrane-based

New human kinase polypeptide, useful in diagnosis, prevention and treatment of cancer, immune disorder, growth and developmental disorder, cardiovascular disorder and lipid disorder.

The present sequence is novel human protein (NHP) known as human kinase.

The human kinases share structural similarity with animal kinases, more particularly serine or threonine protein kinases. Human kinase cDNA is useful for the detection of mutant human kinase cDNA is useful for the detection of symptomatic or phenotypic manifestations of disease, and also as a therapeutic. It is useful for screening drugs effective in the treatment of symptomatic or phenotypic manifestations of effective in the treatment of symptomatic or phenotypic manifestations of perturbing the normal function of MHP in the body. The NHP nucleotide sequences are useful for generation of onther cellular gene products related to human kinases, and as reagents in assays for screening compounds that are useful for treating mental, biological or medical disorders. NHP oligonucleotides are used as probes. The labelled NHP probes are useful for screening human genomic library for identifying compounds that are useful for screening human genomic library for identifying compounds are used as probes. The labelled NHP probes are used to genetically engineer cells in vivo that functions as bioreactors in the body delivering a continuous supply of NHP to the body. Nucleotide construct encoding NHP succeators in the body delivering a continuous supply of NHP to the body. Nucleotide constructs encoding functional NHPs are used in gene body. Nucleotide constructs encoding necessary to the modulation of NHP expression
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            218 ------GKLIPRHQSIFKSNGFFHGISIPEPEDMETLEEKFSDVHPVALNFMKGCLK 268

                                                                                                                                                                                                                                                   Anulo301-Anulo350. Fapresent nover numen protein kinases Hi-37. In mover numen protein kinases have been identified as members of the tyrosine or serine/threonine kinases (PTK and STK) families. The polynucleotides cancentry protein kinases and the polypeptides may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate kinase expression. For example, they may be used to treat cancers (especially cancers of haematopoietic origin), cardiovascular disease (e.g. atherosclerosis), metabolic disorders (e.g. diabetes), immune related diseases (e.g. heumatoid arthritis), neurological disease (e.g. schizophrenia), neurodegenerative disorders (e.g. diabetes), inflammatory disorders (e.g. asthma), infectious disease (e.g. HIV) and reproductive disorders (e.g. infertility).

Additionally, polynucleotides encoding protein kinases may be used for general the protein kinase polypeptides may be used as antigens in the production of antibodies against the protein kinases and in assays to identify modulators of

The present sequence is a novel protein kinase. The novel protein kinases and the nucleic acids that encode them may be used in the treatment and diagnosis of diseases associated with inappropriate kinase expression such as immune-related diseases and disorders, cardiovascular disease, neurodegenerative diseases and/or cancers. The nucleic acids and complementary sequences may also be used as DNA probes in diagnostic assays. The kinase polypeptides may be used as antigens in the production of antibodies of kinase expression and activity. Diseases related to kinase antibodies and kinase antagonists may also be used to down regulate kinase expression and activity. Diseases related to kinase expression and activity, Diseases related to kinase expression and activity include rheumatorid arthritis, atherosclerosis, autoimmune disorders, complications of organ transplantation, myocardial infarction, immune disorders, cardiomyopathies, strokes, renal failure, oxidative-stress related disorders, chronic inflammatory powel disease, multiple sclerosis, asthma, osteoarthritis, peoriasis, rhinitis, autoimmunity, diabetes, cancers and reproductive
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ä
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     46 KIALREIRMLKQLKHPNLVNLIEVFRRKRKMHLVFEYCDHTLLNELERNPNGVADGVIKS 105

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to a compound comprising a sequence comprising 8-80 base pairs (bp) targeted to a nucleic acid encoding MARK3 (MAP/microtubule affinity-regularing kinase 3), that specifically hybridises with the nucleic acid encoding MARK3 and inhibits expression of MARK3, i.e. is an antisense oligonucleotide (AO). Also included are a composition comprising the compound and a carrier or diluent, inhibiting the expression of MARK3 in cells or tissues, treating an animal having or suspected of having a disease or condition associated with MARK3 and screening for an antisense compound. The antisense oligonucleotide is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   useful for preparing a composition for treating hyperproliferative disorder, particularly cancer and neurodegenerative diseases e.g. Alzheimer's disease. The present sequence is a MARK3 associated protein included in the figures but not mentioned anywhere else in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New antisense compound targeted to a nucleic acid molecule encoding microtubule-affinity-regulating kinases (MARK3), useful for modulating expression of MARK3 or for treating cancer or Alzheimer's disease.

The present invention describes the use of a cyclin-dependent kinase like I (CDKL1) polypeptide or nucleic acid for modulating branching morphogenesis in a mammalian cell or for diagnosing a disease in a patient. Also described: (1) identifying a candidate branching morphogenesis modulating agent; (2) modulating branching morphogenesis modulating ocntacting the cell with an agent that specifically binds a CDKL1 polypeptide or nucleic acid; and (3) a method for diagnosing a disease in a patient. The CDKL1 polypeptide or nucleic acid is useful for modulating branching morphogenesis in a mammalian cell. It is also useful for diagnosing a disease, e.g. andiogenic, apoptotic or proliferation disorder in a patient. The present sequence represent invention. The human CDKL1 gene is located on chromosome 14, more

protein ATP-binding II phosphorylation casein alpha chain
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to an isolated 14257 polypeptide and nucleic acid encoding it. The 14257 protein is a protein kinase that acts as a modulating agent in regulating a variety of cellular processes, including cell proliferation, differentiation, growth and division. The activity of the protein of the invention may be described as; cytostatic; osteopathic hepatotropic; antidiabetic; neuroprotective, antiatthitic; osteopathic antipsoriatic; ophthalmological; antialiflammatory, antithyroid; antistensorlerotic; hypotensive; vasotropic; antiarthmatic; virucide; anorectic; metabolic; immunomodulator and analgesic. The protein of the invention may act as a novel diagnostic target or therapeutic agent
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     controlling certain disorders, for example kinase-associated or other 14257-associated disorders. These may include cellular proliferative disorders such as cancers e.g. acute lymphoblastic leukemia or Hodgkin's disorders include bone metabolism disorders such as osteoporosis, disorders of the immune system, e.g. inflammatory, diabetes mellitus, osteoarthritis and asthma. Proteins of the invention may also be of use as therapeutic agents in cardiovascular disorders such
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New 14257 polypeptides (protein kinases), useful as diagnostic targets and therapeutic agents for controlling cellular proliferative and/or differentiative disorder, bone disorders, immune disorders and
                                                                                                                                                                                                                                                                                    /note= "serine/threonine protein kinase active-site

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present sequence is a novel protein kinase. The novel protein kinases and the mucleic acids that encode them may be used in the treatment and diagnosis of diseases associated with inappropriate kinase expression such as immune-related diseases and disorders, cardiovascular disease, neurodegenerative diseases and/or cancers. The nucleic acids and complementary sequences may also be used as DNA probes in diagnostic
as hypertension and coronary artery disease, and some endothelial cell disorders, including psoriasis. The current sequence represents a human kinase 14257 amino acid sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Human; mouse; protein kinase; antiarthritic; antisclerotic; osteopathic;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Nucleic acids encoding kinase polypeptides, useful for diagnosing and treating immune-related diseases and disorders, cardiovascular disease, neurodegenerative diseases and/or cancers.
                                                                                                                                                                                                                                                                                                                                                                                                                                      PNLVNLIEVFRRKRKMHLVFEYCDHTLLNELERNPNGVADGVIKSVLWQTLQALNFCHIH

The invention relates to a compound comprising a sequence comprising 8-80 base pairs (bp) targeted to a nucleic acid encoding MARX3 (MAP/microtubule affinity-regulating kinase 3), that specifically hybridises with the nucleic acid encoding MARX3 and inhibits expression of MARX3, i.e. is an antisense oligonucleotide (AO). Also included are a composition comprising the compound and a carrier or diluent, inhibiting the expression of MARX3 in cells or tissues, treating an animal having or suspected of having a disease or condition associated with MARX3 and screening for an antisense compound. The antisense oligonucleotide is useful for preparing a composition for treating hyperproliferative disorder, particularly cancer and neurodegenerative diseases e.g. Alzheimer's disease. The present sequence is a MARX3 associated protein included in the figures but not mentioned anywhere else in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 156 AYTDYVATRWYRAPELLVGDTQYGSSVDIWAIGCVFAELLTGQPLWPGKSDVDQLYLIIR 215

WO200279449-A2

is

```
The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention iseful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL16176-ABL30511), expressed DNA ABB72072). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                               New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signaling and cell-cell

This invention describes a novel disease detection and treatment molecule polypeptide (MDDT) which has anti-inflammatory, immunosuppressive, osteopathic, cytostatic, anti-HTV, haemostatic, nephrotropic, costeopathic, cytostatic, anti-HTV, haemostatic, nephrotropic, anti-HTV, nephrotropic, anti-HTV, nephrotropic activity. The polymucleotides and the polypeptides of the invention can be used for gene therapy, compared in replacement therapy and are useful for treating a variety of protein replacement therapy and are useful for treating a variety of diseases or conditions. These polypeptides or polymucleotides are particularly useful for diagnosing, treating or preventing cell particularly useful for diagnosing, treating or preventing cell compared in minunodeficiency syndrome (AIDS), Goodpasture's concern inflammation, osteoporosis, thrombocytopaenia, psoriasis or syndromes, inflammation, osteoporosis, thrombocytopaenia, psoriasis or compared in the disclosure of the invention. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                         1 MEKYEKLAKTGEGSYGVVPK.....RKARNEGRNRRRQQVLPLKS 347

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence 6, Application US/09671050

Sequence 6, Application US/09671050

Patent No. 6716616

GENERAL INFORMATION:

APPLICANT: Donobo, Gregory

APPLICANT: Triedrich, Glenn

APPLICANT: Friedrich, Glenn

APPLICANT: Sands, Arthur T.

TILLE OF INVENTION: No. 6716616el Human Kinase Proteins and

TILLE OF INVENTION: No. 6716616el Human Kinase Proteins

TILLE OF INVENTION: No. 6010106-11

FILE REFERENCE: LEX-00106-105

CURRENT FILING DATE: 2001-06-11

PRIOR PILING DATE: 2001-06-11

PRIOR PILING DATE: 1999-09-28

NUMBER OF SEQ ID NOS: 13

SOFTWARE: FastERQ for Windows Version 4.0

LEWING ABSTERMANE: ALLOSS AND ALLOSS AND ALLOSS AND ALLOSS AND ALLOSS AND ALLOSS AND ALLOSS AND ALLOSS AND ALLOSS AND ALLOSS AND ALLOSS AND ALLOSS AND ALLOSS AND ALLOSS AND ALLOSS AND ALLOSS AND ALLOSS AND ALLOSS AND ALLOSS AND ALLOSS AND ALLOSS AND ALLOSS AND ALLOSS AND ALLOSS AND ALLOSS AND ALLOSS AND ALLOSS AND ALLOSS AND ALLOSS AND ALLOSS AND ALLOSS AND ALLOSS AND ALLOSS AND ALLOSS AND ALLOSS AND ALLOSS AND ALLOSS AND ALLOSS AND ALLOSS AND ALLOSS AND ALLOSS AND ALLOSS AND ALLOSS AND ALLOSS AND ALLOSS AND ALLOSS AND ALLOSS AND ALLOSS AND ALLOSS AND ALLOSS AND ALLOSS AND ALLOSS AND ALLOSS AND ALLOSS AND ALLOSS AND ALLOSS AND ALLOSS AND ALLOSS AND ALLOSS AND ALLOSS AND ALLOSS AND ALLOSS AND ALLOSS AND ALLOSS AND ALLOSS AND ALLOSS AND ALLOSS AND ALLOSS AND ALLOSS AND ALLOSS AND ALLOSS AND ALLOSS AND ALLOSS AND ALLOSS AND ALLOSS AND ALLOSS AND ALLOSS AND ALLOSS AND ALLOSS AND ALLOSS AND ALLOSS AND ALLOSS AND ALLOSS AND ALLOSS AND ALLOSS AND ALLOSS AND ALLOSS AND ALLOSS AND ALLOSS AND ALLOSS AND ALLOSS AND ALLOSS AND ALLOSS AND ALLOSS AND ALLOSS AND ALLOSS AND ALLOSS AND ALLOSS AND ALLOSS AND ALLOSS AND ALLOSS AND ALLOSS AND ALLOSS AND ALLOSS AND ALLOSS AND ALLOSS AND ALLOSS AND ALLOSS AND ALLOSS AND ALLOSS AND ALLOSS AND ALLOSS AND ALLOSS AND ALLOSS AND ALLOSS AND ALLOSS AND ALLOSS AND ALLOSS AND ALLOSS AND ALLOSS AND ALLOSS AND ALLOSS AND ALLOSS AND ALLOSS AND ALLOSS AND ALLOSS AND ALLOSS AND ALLOSS AND ALLOSS AND ALLOSS AND ALLOSS AND ALLOSS
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       32;

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

"A family of human cdc2-related protein kinases.";
EMBO J. 11.2909-2917(1992)
-I- CATALYTIC ACTIVITY: ATP + a protein = ADP + a phosphoprotein.
-I- SIMILARITY: Belongs to the Ser/Thr protein kinase family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          MIN. 603441.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Klein S., Gerhard D.S.;
Submitted (JUN-2004) to the EMBL/GenBank/DDBJ databases.
Submitted (JUN-2004) to the Ser/Thr protein kinase family.
I. SIMILARITY: Belongs to the Ser/Thr protein kinase family.
BMBL; BCO741132.13;
GO; GO:0005524; F:ATP binding; IEA.
GO; GO:0004674; F:protein serine/threonine kinase activity; IEA.
GO; GO:0004740; F:protein-tyrosine kinase activity; IEA.
GO; GO:0006468; P:protein amino acid phosphorylation; IEA.
